

CASE STUDY

Connecting Sales, Operations & Learner Onboarding

Airtable · Agam CRM · Zapier · Slack · Zoho Mail · Excel

Sales CRM → Reporting → Payment Verification → Onboarding → Communication → Certification

Operational Scale

60–80

Learners onboarded/month

~5

Salespeople

18–20

Active batches

20+

Active Slack channels

~3 mo

Per program duration

The Problem

Payment, learner verification, sales communication, onboarding and certificate dispatch involved multiple manual handoffs between Sales and Operations. This created delays, repeated back-and-forth, and a high risk of errors at every stage of the learner journey.

Challenges

- 2–3 hour onboarding cycles per learner
- Repeated Sales ↔ Operations communication
- Manual email preparation and sending
- Email and account switching overhead
- Risk of incorrect learner details
- Difficulty tracking delayed onboardings

Before — Manual Flow

The System I Built

Three automation modules connected into one end-to-end operational workflow

Three Automation Modules

MODULE 01

Lead & Sales Reporting

Airtable/CRM → Filter leads → Scheduled 7PM trigger → Sales report → Sales team visibility

MODULE 02 ★ FLAGSHIP

Sales-to-Onboarding

Payment → Airtable form → Sales verify → Ops check → Zapier → Personalized Zoho email → Learner onboarded

MODULE 03

Certificate Dispatch

Certificate ready → Checkbox trigger → Zapier → Fetch learner details → Personalized email → Certificate delivered

Key Integrations

TOOL	ROLE
Airtable	CRM, forms, learner records
Agam CRM	Sales pipeline management

Zapier	Automation triggers & logic
Slack	Sales ↔ Ops notifications
Zoho Mail	Personalized email delivery
Excel	Reporting & tracking

Module 02 — Sales-to-Onboarding ★

The flagship automation — connecting payment to learner onboarding end-to-end

Automated Flow

- STEP 01** **Learner Submits Form**
Post-payment Airtable form completed by learner
- STEP 02** **Airtable Record Created**
Learner details auto-populated in database
- STEP 03** **Slack → Sales Team**
Automatic notification sent to assigned salesperson
- STEP 04** **Sales Verifies Details**
Confirms learner information is correct
- STEP 05** **Move to Onboarding**
Record status updated in Airtable
- STEP 06** **Slack → Operations**
Ops team alerted with learner details
- STEP 07** **Ops Confirms Details**
Batch, payment, credentials and data verified
- STEP 08** **Process Onboarding**
Trigger set in Airtable to proceed
- STEP 09** **Zapier Fires**
Automation picks up the onboarding trigger
- STEP 10** **Personalized Zoho Email**
Welcome email with credentials sent automatically

Before vs After

- BEFORE**
 - Manual payment sharing
 - Find correct salesperson
 - Call/message learner
 - Wait for response
 - Manually verify details
 - Prepare email manually
 - Switch email accounts
 - Send onboarding email
- AFTER**
 - ✓ Form auto-creates record
 - ✓ Slack alerts salesperson
 - ✓ Sales verifies in Airtable
 - ✓ Slack alerts ops team
 - ✓ Ops confirms and triggers
 - ✓ Zapier fires automatically
 - ✓ Zoho email sent instantly
- Why this mattered**

With 60–80 learners onboarding monthly, a 2–3 hour manual process per learner created a constant operational backlog. Reducing this to ~30 minutes freed the ops team to focus on quality rather than repetitive execution.

Module 01 — Sales Reporting

Automated daily sales visibility at 7 PM

Module 03 — Certificate Dispatch

Automated certificate delivery per learner

Impact & Results

What changed across all three automation modules

~80%+
Reduction in onboarding processing time

~2 hrs
Saved per batch on certificates

60–80
Learners/month handled by the system

18–20
Active batches supported simultaneously

~5
Salespeople with automated handoffs

AREA	BEFORE	AFTER
Onboarding time	2–3 hours per learner	~30 minutes
Sales reporting	Manual, inconsistent	Automated daily at 7 PM
Sales → Ops handoff	Manual calls and messages	Slack automation triggered
Onboarding email	Manual preparation + account switching	Auto-sent via Zoho Mail
Certificate dispatch	Manual per learner	Checkbox → auto email
Error risk	High — manual data entry	Significantly reduced

BEFORE
Manual · Reactive · Multiple handoffs
Repetitive · Error-prone · Slow

AFTER
Triggered · Structured · Automated
Trackable · Scalable · Reliable

Key Takeaway

The goal wasn't simply to automate individual tasks. It was to connect Sales and Operations into one reliable workflow that reduced delays and improved the learner experience.

TOOLS:

Airtable

Agam CRM

Zapier
