

Live Session Recording Automation

Google Drive → Zapier → YouTube → Slack → Discord

PROGRAM SCALE

15–20 Live Cohorts

TEAM CONSTRAINTS

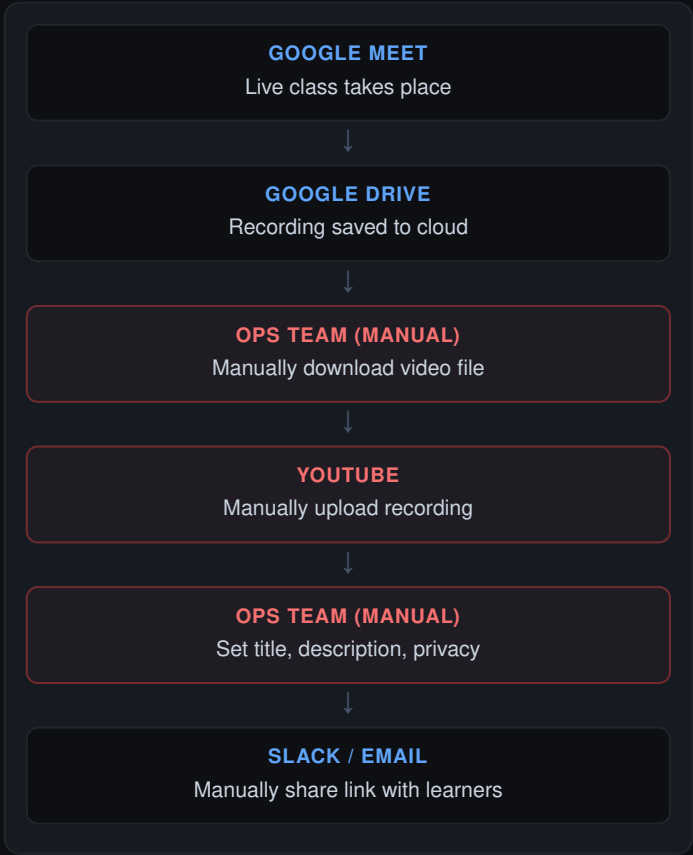

2 Operations Members

Operational Context & Operational Bottleneck

COVID-Era Online Learning — A Gap in the Learning Experience

During COVID, running 15 to 20 live online programs simultaneously with just two operations members created major delivery delays. Google Meet session recordings were saved to the cloud but manually downloaded, uploaded to YouTube, set with metadata/privacy controls, and shared across channels. Recordings were uploaded in batches at the end of the day rather than immediately after class. A learner finishing at 1 PM often waited until 6–7 PM (or next morning) to access materials needed for subsequent coursework.

Before — Manual Process

Why This Mattered

With 15–20 programs running at once, the ops team was handling recordings for multiple sessions every single day.

Manual steps meant learners waited hours for recordings they needed to keep up with coursework.

During COVID, timely access to recordings was critical to the learning experience.

6–7 hrs
Typical wait time for recordings
(Sometimes next morning)

After — Automated Workflow Animation

Automated Architecture Breakdown

STEP 01

Google Meet / Drive

Session recording auto-saved into monitored folder upon meeting exit.

STEP 02

Zapier Webhook Trigger

CASE STUDYignated Drive folder.

STEP 05

YouTube Privacy Control

Title applied automatically and privacy access configured to Unlisted.

STEP 06

Slack Broadcast

Recording link and session metadata posted to internal ops Slack channel.

STEP 03

YouTube Pipeline Upload

Video uploaded automatically to channel via direct API stream.

STEP 04

Zapier Metadata Parser

Extracts session title and constructs standardized video title & description.

STEP 07

Discord Learner Post

Link passed downstream and posted to specific student Discord cohort channel.

STEP 08

Learner Instant Access

Recording accessible to learners within ~1 hour of session conclusion.

The Impact & Results

Metric / Process Area	Before (Manual)	After (Automated)
Recording Delivery	6–7 hours (sometimes next day)	~1 hour after session
Upload Process	Manual download + upload	Fully automated
Sharing Process	Manual message + link	Auto-posted to Discord
Ops Workload	High daily manual effort	Eliminated for recordings

Tools Utilized:

Google Meet

Google Drive

Zapier

YouTube

Slack

Discord
