

Publish Once Reach Everyone

Facebook / LinkedIn → Zapier Trigger → Message Builder → 25+ Discord Channels

The Problem

Every post meant repeating the same manual process across 25+ channels. The company regularly shared new content on Facebook and LinkedIn—new projects, portfolio updates, learning resources, and company announcements. Whenever a new post went live, the operations team had to manually share it with the learner community on Discord. The process involved copying the post link, preparing a message using an existing template, adding the link, and then posting across 25+ channels.

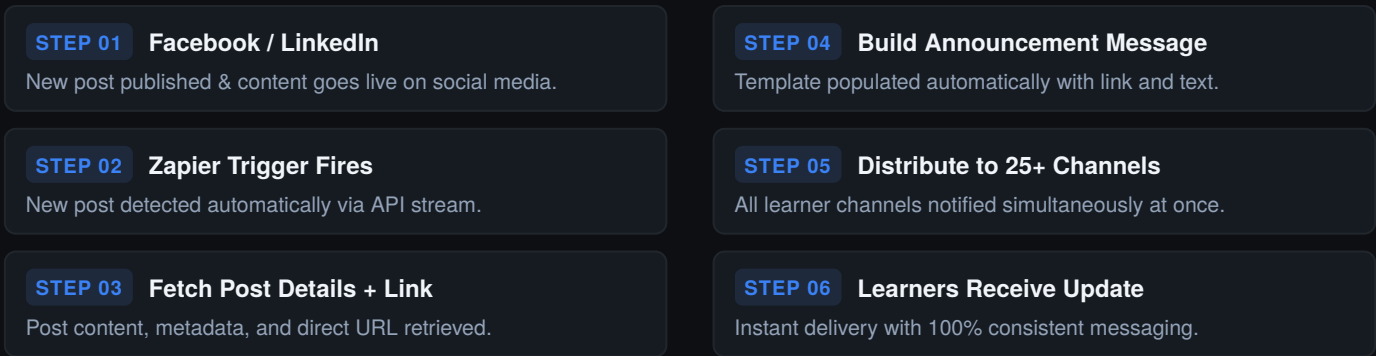

Before — Manual Process

Challenges

- Repetitive copy-paste work
 - 25+ channels to manage manually
 - Manual message preparation each time
 - Significant delay between post and update
 - Constant risk of missing a channel
 - Inconsistent messaging across groups
- 4 Steps / ~1 Hr**
Manual overhead per single post

After — Automated Workflow

Results: Before vs After

Metric / Process Area	Before (Manual)	After (Automated)
Manual steps per post	4 steps repeated 25+ times	0 — fully automated
Time per post	~1 hr of manual work	Instant

Metric / Process Area	Before (Manual)	After (Automated)
Channels reached	Error-prone, often missed	All 25+ every time
Message consistency	Varied per manual entry	100% consistent
Community engagement	Delayed, inconsistent	+20% engagement increase

4 Steps
Removed per post
